

Success Story: Maya HTT Implements Datacenter Clarity LC® At A Major Colocation Provider's 14 Datacenters

As a Top 30 green power Tech and Telecom Company, the colocation provider operates 14 next-generation software-defined datacenters that provides wholesale and retail colocation space.

Challenges

With a presence in multiple markets across the U.S. and growing their North American footprint, the colocation provider went through an exhaustive evaluation process with over 15 candidates to decide which DCIM solution would help them manage their mission critical facilities.

To keep up with the continuing market expansion activity, the colocation provider needed a tool to integrate with both new and legacy data center infrastructure.

Solution Provided

The colocation provider selected Datacenter Clarity LC because Datacenter Clarity LC meets these requirements, enabling an automated gathering and reporting of data from all aspects of the data center; from the utility feed down to the breaker level, including the fire & life safety systems. Datacenter Clarity LC's native connectivity supports over 800 different protocols out of the box.

"We needed a solution that offered the entire suite of services DCIM's are supposed to offer to satisfy the needs of our engineers, technicians, and business stakeholders - power monitoring, alarming, capacity management, and remote access that fits into a true colocation environment. Not only was Maya HTT's solution the right fit, but the team of professionals supporting, developing, and implementing the solution, alongside their engineers proved that we were in good hands." said the CTO.

Benefits

The colocation provider has implemented the solution in multiple facilities so far. Maya HTT continues to deploy and scale the application across the customer's entire portfolio. Datacenter Clarity LC will be monitoring and managing close to half a million square feet and over 40 MW of power and Datacenter Clarity LC will make it easy to manage while providing an accurate picture of the datacenter in real-time.

"A data center is basically a living, breathing ecosystem. With Clarity LC, we've gotten exactly that: Clarity. Essentially, the ability to track elements of availability and usage on a per-customer-basis and gain graphical visibility on any changes ensures that our customers will have a reliable, effective, and dynamic environment to operate and grow their businesses." said the CTO.

About Datacenter Clarity LC

Datacenter Clarity LC provides the tools to accurately and efficiently manage datacenter infrastructure. Equipped with a complete real-time picture of asset attributes in 3D, Datacenter Clarity LC helps decision makers create the most efficient possible datacenter configuration by placing state of the art engineering software tools in the hands of stakeholders.

About Maya HTT

MAYA is a leading developer and provider of CAE and DCIM solutions as well as the author of a variety of software products within the Siemens PLM portfolio. MAYA's solutions are deployed worldwide across a wide array of industries to increase efficiency and deliver high quality performance insight.
